

Opioid Overdose Response

Follow these steps for naloxone ampoule injection

1

SAFETY

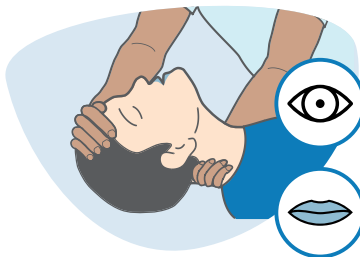

Check the person and area for anything unsafe.

2

OPIOID OVERDOSE? LOOK FOR THE SIGNS

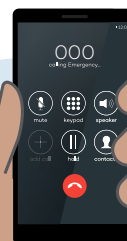

- Not responding
- Pinned pupils
- Not breathing normally – shallow slow breathing or snoring
- Pale or cold skin, blue or grey lips and fingertips

3

CALL TRIPLE ZERO (000)

I think it's an overdose

4

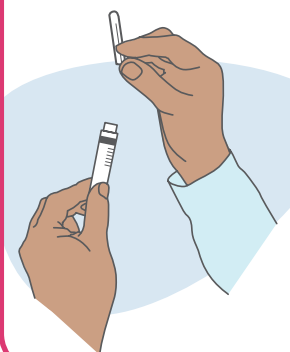

LIE PERSON ON SIDE

Put person in recovery position.

5

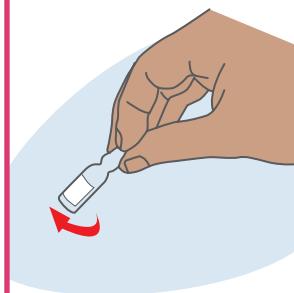

ATTACH THE NEEDLE TO A SYRINGE

6

SWIRL THE AMPOULE

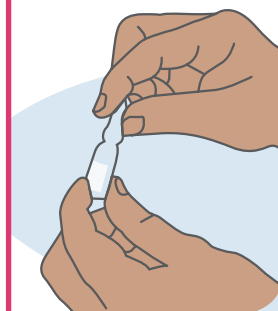

Tap or swirl
ampoule so liquid
is at the base.

7

HOLD THE AMPOULE

Hold base of
ampoule in one
hand and pinch the
top with the other.

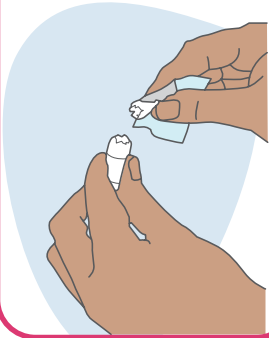

continued on next page

8

SNAP THE AMPOULE

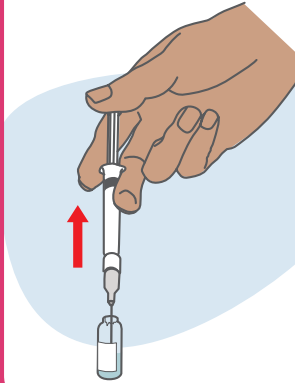

Snap the ampoule top away from you. Use a tissue or pen lid to reduce chance of injury.

9

DRAW UP NALOXONE INTO A SYRINGE

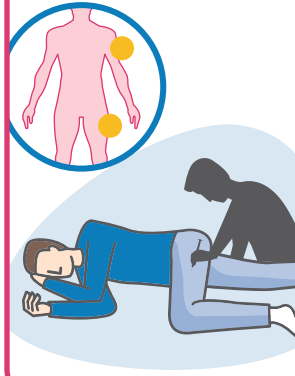

The ampoule holds one full dose of naloxone.

10

POSITION THE NEEDLE

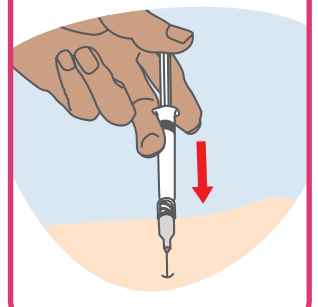

Insert needle into outer thigh or upper arm.

11

GIVE ONE DOSE OF NALOXONE

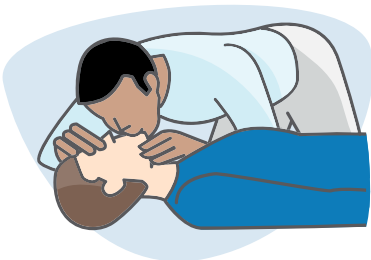

Inject full dose of naloxone. You can inject through clothing if necessary.

12

ARE THEY BREATHING?

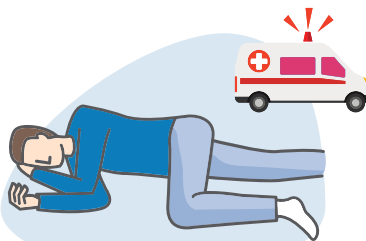

If not, use *rescue breathing* if you know how – lie person on back and give 2 breaths.

13

RECOVERY

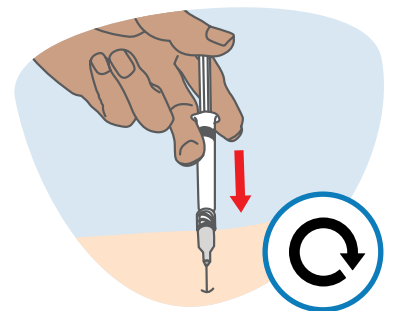

Put person in the recovery position. Stay with them until Ambulance arrives.

14

REPEAT DOSE IF NEEDED

If no response, inject another dose every 2 to 3 minutes until person recovers or ambulance arrives.

Use naloxone to reverse opioid overdose (e.g. heroin, morphine, methadone, oxycodone, prescription opioids, fentanyl). It takes 2–5 minutes to start working and lasts about 30-90 minutes.
